StoneWood changes, October 12-13, 2026

Not committed yet. All tests (199) and the build pass. The database updates still need to be run by the partner.

Booking fixes

- Fixed rooms showing as available but refused at payment (calendars only blocked the first day of a multi-day stay).
- Single-slot packages can only pick one date.
- Going back to one date restores Day/Night Tour.
- Added charges are priced for every day of a stay.
- Pending reschedules block all days of the stay.
- Payment step offers "Choose another room/date" instead of only Retry.
- "Complete" only shows on the last day of a stay.
- Reports and the end-of-day email include multi-day stays.

Staff accounts and roles

- Three roles: Owner, Front desk, Caretaker, each with their own login.
- Staff Accounts screen for the owner.
- Every action is checked against the role by the server.
- Activity History shows who did each action; the owner can filter by person.

Requests to the owner

- Refunds, voids, cancellations, deletes and similar actions by staff go to the owner for approval.
- Owner approves or declines (reason optional).
- Requests box on the Dashboard can be folded with an arrow.

My Tasks

- Caretaker: prepare, inspect, clean and upkeep tasks.
- Front desk: collect balances, close the day, check-ins, unpaid walk-ins, guest messages.
- Owner: approvals, refunds owed, cash counts that were off, low stock.

Inspections

- Photos and inspector's name saved with inspections.
- Damage shows to front desk and on the guest's booking page.
- Broken items can reduce the stock count.

Inventory

- Stock history records every change and who made it.
- Upkeep and cleaning tasks deduct supplies automatically.
- "Add" stock, with optional cost recorded as an expense.

- Supplies screen kept as the original + / - layout.

Settings

- Owner can edit rates, discounts, capacity, hours and contact details.

Money

- Front desk closes the day.
- New cash count review for days that were short or over, with ways to fix or accept the difference.

Reminders and exports

- Tomorrow's arrivals list with text message buttons.
- Automatic reminder email the day before.
- Excel export and Print / Save as PDF in Reports.

Other fixes

- Sample bookings no longer flash on the Dashboard.
- Tabs detect when a different person signs in on the same browser.
