STONEWOOD PRIVATE RESORT

System Test Cases

Manual test cases for the booking and resort-management system. Supersedes Test-Case.docx.

1. Purpose

This document lists the manual test cases for the StoneWood Private Resort booking and management system. It replaces the earlier Test-Case document, in which several steps referred to buttons and screen names that do not exist in the build. Every label quoted here was taken from the current source code.

Each case is self-contained: a tester who has never seen the system should be able to follow it without asking questions.

2. Before you start

Build / commit	_____
Tested on	_____ (date)
Tester	_____
Browser & device	_____
Environment	Staging only. Never run these against the live database — they create real bookings, payments and inventory rows.
Admin sign-in	Ask the project owner for the staging username and password. Do not write them in this document.

Marking a result: circle Pass when everything under “Expected result” happened; Fail when any part did not; Blocked when you could not run the case (for example the page would not load). Always write what you actually saw under “Actual result”, even when it passed.

3. Screen names used in these cases

The admin sidebar groups its screens. These are the exact names on screen:

Sidebar group	Screens
TODAY	Dashboard
RESERVATIONS	All Bookings · Booking Calendar
RESORT UPKEEP	Facilities & Inspections · Supplies & Equipment
MONEY	Payments & Expenses · Reports
WHAT GUESTS SEE	Rooms · Packages & Prices · Website Photos
GUESTS	Guest Messages
WEBSITE	Website Maintenance
HISTORY	Activity History

The guest site has: Home, Rooms, Packages, Gallery, About Us, Book Now, Customer Service and Manage Booking.

4. Rules the cases rely on

Pool capacity	30 guests per slot, shared. Day and Night are counted separately.
Exclusive booking	A buyout takes the WHOLE date — both Day and Night — not just one slot.
Day Tour	7:00 AM – 5:00 PM.
Night Tour	7:00 PM – 5:00 AM the next day. The resort is cleaned 5:00 – 7:00 AM before the next Day Tour.
Whole Day	7:00 AM – 5:00 AM the next day.
Length of stay	One booking may run 1 to 3 days. The days must be consecutive and all available.
Rooms	Rented per slot, not per night. A room used for the Night is free for the next morning's Day Tour.
Prices	Shared pool ₱200 per guest per slot · Exclusive pool ₱6,000 per slot · Events venue ₱5,000 per slot · Overtime ₱500/hr, 2 hrs maximum, Day only.
Down payment	50% of the total, or the guest may pay in full.
Payment methods	QR Ph (online checkout) and Cash at the desk. Bank transfer is not accepted.
Refunds	Only when the RESORT cancels. A guest who cancels is not refunded.
Booking window	Today up to 3 months ahead, and never past 31 December of the current year.

5. Test cases

TC-01	The calendar shows which dates are open, booked and closed
Area	Guest site — availability
Precondition	The public site is reachable and at least one date has been closed by the admin in Booking Calendar.
Steps	1. Open the home page. 2. Look at the “Find your perfect date” calendar. 3. Read the legend under the calendar.
Expected result	• Open dates are green and clickable. • Fully booked dates are grey and cannot be clicked. • Dates the admin closed are red and cannot be clicked. • Dates in the past and dates more than 3 months ahead are dimmed and cannot be clicked.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-02	A stay of up to 3 days is picked by clicking two dates
Area	Guest site — availability
Precondition	Three consecutive open dates exist on the calendar.
Steps	1. On the home page calendar, click an open date. The line under the calendar now asks for a last day. 2. Click the date two days later. 3. Try to click a date four days after the first one.
Expected result	• The first and last days are solid green; the day between them is a lighter green band. • A line is drawn joining the first day to the last. • The panel reads “Selected dates” and shows the range with “(3 days)”. • The price multiplies by the number of days, and the guest line reads “₱200 per guest, per day”. • The fourth day cannot be clicked; hovering it says a stay can run for up to 3 days in a row.
Actual result	
Status	Pass / Fail / Blocked (circle one)
Note	*A stay cannot jump over a booked or closed day: dates after the first unavailable one are not clickable either.*

TC-03	Booking a fixed package shows the right price and summary
Area	Guest site — booking
Precondition	At least one active package exists in Packages & Prices.
Steps	1. Go to Packages and choose a package. 2. Pick an available date and continue to the end of the booking steps. 3. Read the RESERVATION SUMMARY.
Expected result	• The summary shows Date (or Dates), Package availed, Guests and Room. • The total equals the package price shown on the Packages page. • “50% deposit” and “Pay in full” both show the correct amount.
Actual result	

Status	Pass / Fail / Blocked (circle one)

TC-04	**A custom shared Day Tour is priced per guest**
Area	Guest site — booking
Precondition	An open date with room for more guests.
Steps	1. Go to Book Now. 2. Choose Day Tour, Pool, Shared. 3. Set the guest count to 10. 4. Pick an open date and read the total.
Expected result	• The total is ₱2,000 (10 guests × ₱200). • The down payment shown is ₱1,000.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-05	**An exclusive booking blocks the whole date for everyone else**
Area	Guest site — availability
Precondition	An Exclusive booking exists on a known date.
Steps	1. On the booking calendar, find that date. 2. Try to book a Day Tour on it. 3. Try to book a Night Tour on it.
Expected result	• The date is shown as booked and cannot be chosen for either slot.
Actual result	
Status	Pass / Fail / Blocked (circle one)
Note	*This is deliberate: a buyout covers Day and Night, not one slot.*

TC-06	**The Night Tour runs overnight and does not block the next morning**
Area	Guest site — booking
Precondition	Two consecutive open dates.
Steps	1. On the home page, look at the VISIT TYPE options. 2. Book a Night Tour on the first date. 3. Go back and try to book a Day Tour on the SECOND date.
Expected result	• Night Tour reads “7:00 PM — 5:00 AM (next day)”, and Whole Day reads “7:00 AM — 5:00 AM (next day)”. • The Night Tour booking is accepted for the first date. • The next morning's Day Tour is still available and can be booked.
Actual result	
Status	Pass / Fail / Blocked (circle one)
Note	*The resort is cleaned 5:00 – 7:00 AM, which is why the overnight stay does not take the following day.*

TC-07	A booking over the pool capacity is refused
Area	Guest site — booking
Precondition	A date with 25 shared guests already booked for the Day slot.
Steps	1. Go to Book Now and choose Day Tour, Pool, Shared. 2. Set the guest count to 10. 3. Try to pick that date.
Expected result	• The date cannot be chosen, or a message says the pool cannot take that group size. • No booking is created.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-08	A date the resort closed cannot be booked
Area	Guest site — booking
Precondition	The admin has closed a date in Booking Calendar.
Steps	1. Go to Book Now. 2. Try to pick the closed date.
Expected result	• The date is red and cannot be clicked. • If a stay is being picked, the range stops before that date.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-09	The QR Ph down payment is created for the right amount
Area	Guest site — payment
Precondition	PayMongo test keys are configured. A completed booking form.
Steps	1. Complete the booking steps and reach the payment screen. 2. Choose “50% deposit”. 3. Read the amount shown beside the QR code.
Expected result	• A QR code appears with a countdown. • “Due now” equals half the total, and “Balance on arrival” equals the other half. • The amount on the QR matches “Due now”.
Actual result	
Status	Pass / Fail / Blocked (circle one)
Note	*Scanning and paying is a manual step. Use PayMongo test mode; never a live key.*

TC-10	A paid booking confirms on screen and by email
Area	Guest site — payment

Precondition	TC-09 completed and the test payment marked paid in PayMongo.
Steps	1. Let the page finish checking the payment. 2. Read the confirmation screen. 3. Open the guest's email inbox.
Expected result	• A booking reference beginning with SW- is shown. • A receipt email arrives with the same reference, the date (or date range) and the amount paid. • The booking appears in All Bookings in the admin.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-11	**A guest can look up their own booking**
Area	Guest site — manage booking
Precondition	A confirmed booking with a known reference and email.
Steps	1. Go to Manage Booking. 2. Enter the booking reference and the email used. 3. Submit.
Expected result	• The booking is shown with its date (or date range), package, guests and what has been paid. • A wrong reference or a wrong email does not open anybody else's booking.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-12	**A guest can ask to move their booking to another date**
Area	Guest site — manage booking
Precondition	A confirmed booking whose visit date has not passed.
Steps	1. Open the booking in Manage Booking. 2. Choose to move it to another date and pick a free date. 3. Confirm. 4. In the admin, open Dashboard and then the Reschedules tab.
Expected result	• The guest is told the new date is held for them for 48 hours while the resort approves. • The booking still shows its original date until the resort approves. • The request appears under Reschedules, and the held date is not offered to anyone else.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-13	**A guest cancellation frees the date and is not refunded**
Area	Guest site — manage booking
Precondition	A confirmed booking with a down payment recorded.
Steps	1. Open the booking in Manage Booking.

	2. Cancel it and read the notice shown before confirming. 3. Confirm the cancellation. 4. Go back to the booking calendar and look at that date.
Expected result	• Before confirming, the guest is told the payment is not refunded. • The booking's status becomes Cancelled. • The date becomes available again for other guests. • No refund is created.
Actual result	
Status	Pass / Fail / Blocked (circle one)
Note	*Refunds exist only when the RESORT cancels — see TC-27.*

TC-14	**A guest message reaches the admin with the right label**
Area	Guest site — messages
Precondition	None.
Steps	1. Go to Customer Service. 2. Send a message, choosing the type “Question”. 3. In the admin, open Guest Messages.
Expected result	• The message appears in the inbox. • It is labelled Question. • The sidebar shows a count beside Guest Messages while it is unread.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-15	**The refund request page explains who may claim**
Area	Guest site — refunds
Precondition	None.
Steps	1. Open the refund page (the link in a resort-cancellation email, /customer/refund). 2. Read the notice.
Expected result	• It says refunds apply when the resort cancelled the booking. • It says a guest who cancels is not refunded, and offers moving the date instead. • The resort's contact details are shown.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-16	**Admin sign-in works and repeated wrong attempts are slowed**
Area	Admin — access
Precondition	Staging admin credentials from the project owner.
Steps	1. Go to the admin login page.

	2. Sign in with a wrong password and read the message. 3. Sign in with a wrong username and read the message. 4. Repeat wrong attempts nine times in a row. 5. Sign in correctly.
Expected result	• A wrong username and a wrong password give the SAME message, so neither can be guessed from the other. • After eight failed attempts the next one is refused for a while. • A correct sign-in opens the Dashboard.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-17	**An unattended admin screen signs itself out**
Area	Admin — access
Precondition	Signed in to the admin.
Steps	1. Sign in and leave the computer completely alone — do not move the mouse or press a key. 2. Wait 29 minutes and look at the screen. 3. Wait until 30 minutes have passed. 4. Try to use any admin screen.
Expected result	• Shortly before 30 minutes a notice says you will be signed out and that moving the mouse keeps you signed in. • At 30 minutes the session ends and the browser returns to the public site. • The old session no longer works; signing in again is required.
Actual result	
Status	Pass / Fail / Blocked (circle one)
Note	*The dashboard refreshes itself in the background, and that must NOT count as activity. Leaving the tab open is not enough to stay signed in.*

TC-18	**The Dashboard separates urgent work from reminders**
Area	Admin — dashboard
Precondition	At least one overdue booking and one booking arriving today whose facilities are not prepared.
Steps	1. Open the Dashboard. 2. Read the four cards across the top. 3. Read “Do these first”. 4. Read “Reminders”.
Expected result	• The cards show Still arriving, Guests at the resort, Payments still needed and Money left today. • “Do these first” lists work that blocks other work, such as an overdue arrival or an unsent refund. • “Reminders” lists things that can wait, such as facilities not yet prepared for a later arrival. • Dismissing a reminder with × hides it until the page is reloaded; it can be brought back.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-19	**A pending booking can be accepted or declined**
Area	Admin — bookings
Precondition	A booking with status “Awaiting approval”.
Steps	1. Open All Bookings and find it. 2. Press “Accept booking” and confirm. 3. Find a second pending booking and press “Decline booking”, giving a reason.
Expected result	• The accepted booking becomes “Confirmed booking” and the guest is emailed. • The declined booking is cancelled, the guest is emailed the reason, and the date is released. • Both actions appear in Activity History.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-20	**A walk-in reservation can be taken at the desk, including a multi-day stay**
Area	Admin — bookings
Precondition	Signed in; an open date.
Steps	1. On the Dashboard press “New walk-in”. 2. Fill in the guest's name and mobile number. 3. Set “First day”, then set “Last day” two days later. 4. Choose Day Tour and 10 guests. 5. Take a cash payment and save.
Expected result	• The line under “Last day” reads “3 days … Every day is charged.” • The total is three times the one-day price. • The booking is saved as a confirmed booking with the payment recorded. • All three dates show as taken on the Booking Calendar.
Actual result	
Status	Pass / Fail / Blocked (circle one)
Note	*Leaving “Last day” blank books a single day. Only Cash and GCash are offered at the desk.*

TC-21	**Facilities are prepared before a group arrives**
Area	Admin — daily operations
Precondition	A confirmed booking arriving today.
Steps	1. On the Dashboard find the booking under Arriving. 2. Press “Prepare for arrival”. 3. Tick the checklist and save.
Expected result	• The card's badge changes from “Not prepared” to “Ready”. • The facilities the booking uses are marked as cleaned. • The matching reminder disappears from the Dashboard.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-22	A group is checked in on arrival
Area	Admin — daily operations
Precondition	TC-21 completed.
Steps	1. On the Dashboard press “Check in” on the booking. 2. Look at the On site column.
Expected result	• The booking moves to On site. • “Guests at the resort” on the top cards increases by the group size. • The card shows the time they came in and when their slot ends.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-23	Check-out records damage and charges the right penalty
Area	Admin — daily operations
Precondition	A group that is checked in. A damage rate exists in Facilities & Inspections.
Steps	1. On the Dashboard, on the On site card, press “Check out”. 2. Mark one facility as Damaged and pick an item and a quantity of 2. 3. Read the Bill panel on the right. 4. Save with the button at the bottom.
Expected result	• The penalty equals the quantity × the rate from the rate list, not any amount typed by the browser. • The Bill shows the booking total, what has been paid and the penalty. • The final button reads “Check out · record ₱X”, “Check out, collect later”, or “Complete stay” — there is no button called “Complete Check-Out”. • The damage is listed under Damage records.
Actual result	
Status	Pass / Fail / Blocked (circle one)
Note	*Check-out is on the Dashboard and in the booking view. It is NOT in Facilities & Inspections.*

TC-24	An unpaid balance is collected and the booking closed
Area	Admin — daily operations
Precondition	A booking checked out with money still owed.
Steps	1. On the Dashboard open the “Balance to collect” column. 2. Press “Collect ₱X & close”. 3. Record the payment and confirm.
Expected result	• The booking becomes a completed booking. • The payment appears under Payments & Expenses. • The booking leaves Balance to collect.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-25	**A payment can be recorded and a wrong one undone**
Area	Admin — money
Precondition	A booking with a balance.
Steps	1. Open Payments & Expenses and press “Record payment”. 2. Record a cash payment smaller than the balance. 3. Try to record a payment larger than the remaining balance. 4. On the recorded payment press “Undo payment” and give a reason.
Expected result	• The first payment is saved and the booking's balance drops by that amount. • A payment larger than the balance is refused. • The undone payment stays visible, crossed out, with the reason, and stops counting in the totals. • Both actions appear in Activity History.
Actual result	
Status	Pass / Fail / Blocked (circle one)
Note	*Payments are never edited or deleted. A wrong one is undone and stays in the record.*

TC-26	**An expense can be added and undone**
Area	Admin — money
Precondition	Signed in.
Steps	1. Open Payments & Expenses and go to the Expenses tab. 2. Add an expense paid in cash. 3. Press “Undo expense” and give a reason. 4. Tick “Show voided”.
Expected result	• The expense appears in the month's list and in the by-category totals. • After undoing it, it disappears from the default view and the totals drop. • “Show voided” brings it back into view, crossed out.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-27	**When the resort cancels, the guest may choose a new date or a refund**
Area	Admin — bookings
Precondition	A confirmed booking with a payment.
Steps	1. Open the booking and press “Cancel (resort can't host)”, giving a reason. 2. Read the email sent to the guest. 3. In All Bookings, look at the booking's status.
Expected result	• The status becomes “Guest choosing new date”. • The email gives the reason, says the money is held, and has a button to request a refund. • What the guest paid is shown as held for them, not lost. • The date is released for other guests.

Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-28	**The day is closed with a cash count**
Area	Admin — money
Precondition	At least one cash payment taken today.
Steps	1. On the Dashboard press “Close the day”. 2. Read the list of anything still to finish. 3. Enter the cash counted in the box and save.
Expected result	• “Income and expenses” lists only “Received by QR Ph” and “Received by Cash” — no Bank Transfer line and no “Received online (PayMongo)” line. • The expected cash is the opening float plus cash received minus cash spent. • A difference between counted and expected is shown as Over or Short. • The day cannot be closed while a booking is still unfinished.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-29	**A room can be added with a photo, and the photo is not damaged**
Area	Admin — content
Precondition	A photo file on the computer, about 1–3 MB.
Steps	1. Open Rooms and add a room with a name, beds, capacity and price. 2. Upload the photo. 3. Save, then RELOAD the page and look at the room again. 4. Open the Rooms page on the public site.
Expected result	• The photo still shows correctly after the reload — not blank and not a broken image. • The room appears on the public Rooms page with the same photo. • The room can be picked as an add-on when booking.
Actual result	
Status	Pass / Fail / Blocked (circle one)
Note	*This checks a bug that was fixed: uploaded photos used to be cut short on save and came back corrupted. A photo that is far too large is now refused with a message instead of being saved broken.*

TC-30	**A package added in the admin appears on the website**
Area	Admin — content
Precondition	Signed in.
Steps	1. Open Packages & Prices and add a package with a price and a photo. 2. Save it as active. 3. Open the public Packages page.
Expected result	• The package is listed with the price set in the admin.

	• Choosing it starts a booking at that price. • Marking it inactive removes it from the public page.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-31	**An item at or below its minimum is flagged as low stock**
Area	Admin — supplies
Precondition	Signed in.
Steps	1. Open Supplies & Equipment and add an item with quantity 10 and minimum 5. 2. Change the quantity to 5. 3. Change the quantity to 4.
Expected result	• At 10 the item is not flagged. • At 5 the item IS flagged as low stock. • At 4 it is still flagged.
Actual result	
Status	Pass / Fail / Blocked (circle one)
Note	*The rule is "quantity is at or below the minimum", not "below the minimum". An item exactly at its minimum counts as low.*

TC-32	**Reports show money by method and a full reservations list**
Area	Admin — reports
Precondition	Several payments and bookings exist in the chosen period.
Steps	1. Open Reports and choose a month with activity. 2. Read the "Payment Method" card. 3. Press "Print report" and look at the printed page.
Expected result	• "Payment Method" lists QR Ph and Cash. An "Other" line appears only if older GCash or bank records exist in that period. • The printed report contains a Reservations table with one row per booking — reference, guest, contact, visit, time, package, guests, total, paid, owed and status — ending in a Totals row. • Every table in the printed report has its rows filled in, not just headings. • The Summary total equals the "Money received" figure on screen.
Actual result	
Status	Pass / Fail / Blocked (circle one)
Note	*The printed report used to lose every row because of a formatting fault. Check the rows are really there.*

TC-33	**The Sales CSV matches what is on screen**
Area	Admin — reports
Precondition	Payments exist in the chosen period.
Steps	1. In Reports press "Sales CSV".

	2. Open the downloaded file in a spreadsheet. 3. Compare it with the figures on screen.
Expected result	• Every payment on screen is a row in the file. • The totals in the file match the totals on screen. • Undone payments are marked as such.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-34	**Bookings can be searched and filtered**
Area	Admin — bookings
Precondition	Several bookings with different statuses and dates.
Steps	1. Open All Bookings. 2. Type part of a guest's name in the search box. 3. Filter by a status. 4. Set a visit-date range. 5. Press “Clear filters”.
Expected result	• The list narrows to matching bookings as each filter is applied. • The counts beside each status chip match the number of rows. • “Clear filters” restores the full list.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-35	**Activity History records who did what**
Area	Admin — records
Precondition	Several of the earlier cases have been run.
Steps	1. Open Activity History. 2. Filter by category and by date. 3. Find the entries for a booking you accepted and a payment you undid.
Expected result	• Each entry shows when it happened, who did it and what changed. • The entries cannot be edited or deleted. • “Download CSV” exports what is shown.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-36	**The public site can be closed for maintenance**
Area	Admin — website
Precondition	Signed in, with a second browser that is NOT signed in.
Steps	1. Open Website Maintenance and turn maintenance on, choosing a reason.

	2. In the second browser open the home page. 3. In the second browser open the admin login page. 4. Turn maintenance off again.
Expected result	• Guests see the maintenance message and cannot browse or book. • The login page and the admin panel are still reachable. • Turning it off restores the public site.
Actual result	
Status	Pass / Fail / Blocked (circle one)

TC-37	**The same date cannot be sold twice**
Area	Whole system
Precondition	Two browsers open on the booking page, both on the same free date, Exclusive.
Steps	1. In browser A, complete a booking for that date and pay. 2. In browser B, which was already on the same date, try to complete the booking.
Expected result	• Browser B is told the date is no longer available, or its booking is saved for the owner to check with a warning note rather than silently double-booking. • The Booking Calendar shows the date as taken once, not twice.
Actual result	
Status	Pass / Fail / Blocked (circle one)
Note	*The check is made again on the server at the moment of payment, so this must hold even though browser B's page looked available.*

6. Summary

Cases run	_____ of 37
Passed	_____
Failed	_____
Blocked	_____
Tester signature	_____
Date	_____

List every failure below, with its case number and what you saw.
