STONEWOOD PRIVATE RESORT

Alpha Testing Questionnaire

For the project team and the resort owner, testing the system internally before it is shown to guests.

1. Purpose

Alpha testing is done by the people building and running the resort, before any real guest uses the system. You are checking that every feature works as intended, that nothing important is missing, and that the system is safe to put in front of guests. Work through the test cases document first, then answer these statements from what you actually saw.

2. About you

Name	_____
Role	Developer / Resort owner / Staff / Adviser (circle one)
Date tested	_____
Device & browser	_____
Build / commit	_____

3. How to answer

Tick one box per statement. If a statement does not apply to anything you did, leave the row blank and say so in the comments.

5	4	3	2	1
Strongly agree	Agree	Neutral	Disagree	Strongly disagree

4. Statements

A. Booking and availability

Statement	5	4	3	2	1
1. The calendar clearly shows which dates are open, booked and closed.					
2. Picking a stay of more than one day is easy: I click the first day, then the last.					
3. The system would not let me book more than 3 days in one booking, and said so.					
4. A stay cannot be made to skip over a booked or closed day.					
5. The Day, Night and Whole Day options state their hours clearly, including that the Night Tour ends at 5:00 AM the next day.					
6. A Night Tour booking does not wrongly block the next morning's Day Tour.					
7. The system refuses a booking that would go over the 30-guest pool capacity.					
8. An exclusive booking correctly blocks the whole date, not just one slot.					
9. The price shown to the guest matches the rules for the package, tier and number of days.					

Statement	5	4	3	2	1
10. Rooms can be added to a booking and are shown as taken only for the slot they are used in.					

B. Payment and money

Statement	5	4	3	2	1
11. The QR Ph payment screen shows the correct amount due now and the balance on arrival.					
12. A paid booking produces a reference number on screen and a receipt by email.					
13. The only payment methods offered are QR Ph and Cash, which matches how the resort actually takes money.					
14. A payment larger than the remaining balance is refused.					
15. A payment entered by mistake can be undone with a reason, stays visible in the record, and stops counting in the totals.					
16. Expenses can be recorded and undone the same way.					
17. The end-of-day cash count shows what should be in the box and flags any difference.					
18. Reports and the Sales CSV agree with what is shown on screen.					
19. The printed report includes a complete list of reservations, with every row filled in.					

C. Daily operations

Statement	5	4	3	2	1
20. The Dashboard tells me what needs doing today without my having to search for it.					
21. “Do these first” contains only work that genuinely blocks other work.					
22. “Reminders” contains things that can safely wait, and I can set one aside.					
23. The four figures at the top of the Dashboard are the ones I actually need.					
24. Preparing, checking in, checking out and closing a booking follow the order we work in.					
25. Damage penalties are calculated from the rate list, and I cannot be charged a made-up amount.					
26. Quick tasks let me start a walk-in or a payment without leaving the Dashboard.					
27. I can find any booking quickly by name, reference or phone number.					

D. Guests, messages and changes

Statement	5	4	3	2	1
28. A guest can look up their own booking, and cannot open anybody else's.					
29. A guest asking to move their date is held for 48 hours and waits for my approval.					

Statement	5	4	3	2	1
30. When I move a booking by hand, the whole stay moves and keeps its length.					
31. A guest who cancels is clearly told the payment is not refunded.					
32. When the resort cancels, the guest is told their money is held and is offered a new date or a refund.					
33. Guest messages arrive labelled by type (Question, Feedback, Concern, Request for Refund).					
34. A guest asking to correct their details can be dealt with: I can edit the name, contact and email on the booking.					

E. Content management

Statement	5	4	3	2	1
35. I can add, edit and retire rooms, and the changes show on the public site.					
36. An uploaded photo still looks right after I reload the page.					
37. A photo that is too large is refused with a clear message, rather than saved broken.					
38. I can add and price packages, and they appear on the Packages page.					
39. Supplies are flagged when the quantity reaches the minimum I set.					
40. I can close the public website for maintenance while still reaching the admin panel.					

F. Security and records

Statement	5	4	3	2	1
41. The admin panel cannot be opened without signing in.					
42. A wrong username and a wrong password give the same message, so neither can be guessed.					
43. Repeated wrong sign-in attempts are slowed down.					
44. I am signed out automatically after 30 minutes without touching the computer.					
45. Leaving the dashboard open on its own does not keep me signed in.					
46. Activity History records who did what, and the entries cannot be edited or deleted.					
47. The public pages never expose another guest's personal details.					

G. Performance

Answer from what you experienced, not from a measurement.

Statement	5	4	3	2	1
48. Pages open quickly enough that I never wondered whether they had frozen.					
49. The booking calendar reacts immediately when I click a date.					
50. The admin dashboard loads its figures without a noticeable wait.					

Statement	5	4	3	2	1
51. The public calendar is up to date within a couple of minutes of a booking being made.					
52. Nothing I did produced an error page or a blank screen.					

H. Compatibility and usability

Statement	5	4	3	2	1
53. The system works on the browser I normally use.					
54. The admin panel is usable on a phone as well as a computer.					
55. Text is large enough and clear enough to read in both the light and dark themes.					
56. Buttons say what they do, and I was not surprised by what happened after pressing one.					
57. Error messages told me what was wrong and what to do about it.					
58. I could complete each task without being shown how first.					

5. In your own words

Which part of the system gave you the most trouble, and what happened?

Was anything missing that the resort needs in order to run a normal day?

Did anything behave in a way you did not expect, even if it was not an error?

What should be fixed before real guests are allowed to use this?

6. Sign-off

Name	_____
Signature	_____
Date	_____
